

Mission to Mars

The government has just discovered that in one month, a meteor will crash into the earth and destroy it. The government has one space ship that is ready to be launched. It can hold 5 people and fly them to Mars, where they will try to start a new civilization.

Your group has been appointed by the government to choose the 5 people who will be sent to Mars from the list of eight finalists. Remember that these are the people who will be responsible for starting a new human civilization.

The eight finalists are:

1. A world famous 35-year-old male painter and sculptor.
2. A 67-year-old male Catholic priest.
3. A 23-year-old engineer and his 21-year-old wife, who never went to university. The engineer will not go without his wife.
4. A 40-year-old policeman who will not go without his gun.
5. A 32-year-old female sixth-grade teacher, who was recently arrested for stealing from her students.
6. A 40-year-old female medical doctor
7. A 25-year-old male author.
8. A 1-year-old female baby

Discuss in your group and circle the five people you would put on the rocket to Mars. You must come to an agreement as a group.
